2026-2027 SH T1 G3 Science FA - Science in Action (SIA)

Guidelines | AI Imaginary Animal Classification

Pupils use AI to create an imaginary animal belonging to the animal class assigned by lucky draw.

The task is worth 10 marks.

Name	
Class / class no.	
Assigned animal class	

Important. Use only the class assigned by the teacher. Do not change class without approval. Only label the correct features of that class. Add creative features from other animal classes without labelling.

Important dates

Date	Arrangement
5 Oct 2026	Guidelines issued
23 Oct 2026	Submit the final labelled image to the Teams Assignment by 23 October 2026. The submitted digital work will remain in Teams for the presentation sessions
First 3 weeks of Nov	One-minute presentations during selected single lessons

Class	3A	3B	3C	3D	3E	3F	3G	3H

Simple task flow

Step	What to do	Check
1. Learn	Review the feature bank taught in class.	Choose only features from your assigned class.
2. Plan	Choose exactly 4 correct features.	Decide which are visible and which need fact tags.
3. Prompt AI	Ask AI to show the assigned class and make the selected visible features clear with labelling.	Do not label features from another animal class.
4. Check image	Compare the AI image with the feature bank.	Regenerate if AI labels a wrong-class feature as one of the four assessed features, or if an important selected feature is unclear.
5. Label	Add four arrow labels / fact tags if they're not labelled clearly.	Every visible label must point to the correct part.
6. Present	Use the same four checked features in a one-minute script.	Check if all 4 features are clearly mentioned.

Animal-class feature bank

Assigned class	Features taught in lessons
Mammals	hair/fur; lungs; produce milk; warm-blooded; most give birth to live young
Birds	wings; feathers; beak; lungs; warm-blooded; lay eggs
Fish	gills; most have fins; most have scales; most are cold-blooded; most lay eggs
Reptiles	scales; lungs; cold-blooded; most lay shelled eggs
Amphibians	moist skin; gills when young; lungs when adult/on land; cold-blooded; eggs without shells
Insects	six legs; head/thorax/abdomen; antennae; spiracles; hard outer covering; no backbone; lay eggs

AI image-generation prompt

Image and presentation script can be generated by MagicSchool using the link or QR code in the table below. Students may also use Copilot: https://copilot.microsoft.com/ and log in with their Microsoft 365 account.

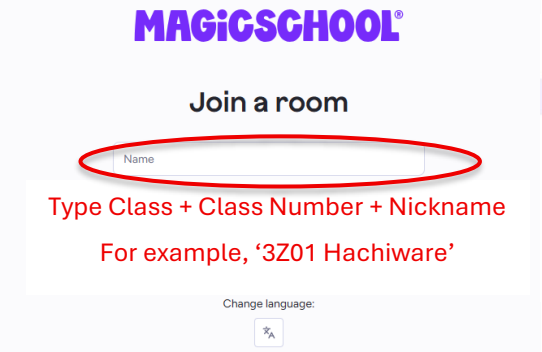

Copy and complete:

Create a child-friendly imaginary animal called [name]. It belongs to the [assigned class] class. The following FOUR assigned-class features must be clearly shown: [feature 1], [feature 2], [feature 3], [feature 4]. Make every visible feature easy to see and leave space for arrows and labels. Clearly label the features with the animal class assigned. Make it imaginary and different from a real species. [Creative features] Use a simple background.

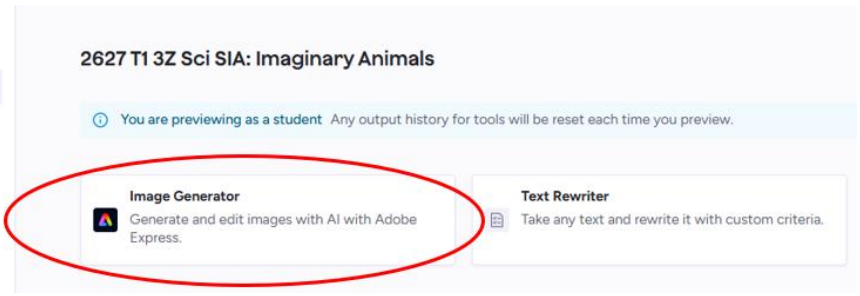

Step 1: Access the link or QR code for your class.

QR Code								

Step 2: Type your information

Step 3: Select 'Image Generator'

Remarks: Students may also use Copilot: https://copilot.microsoft.com/ log in with their MS365 account.

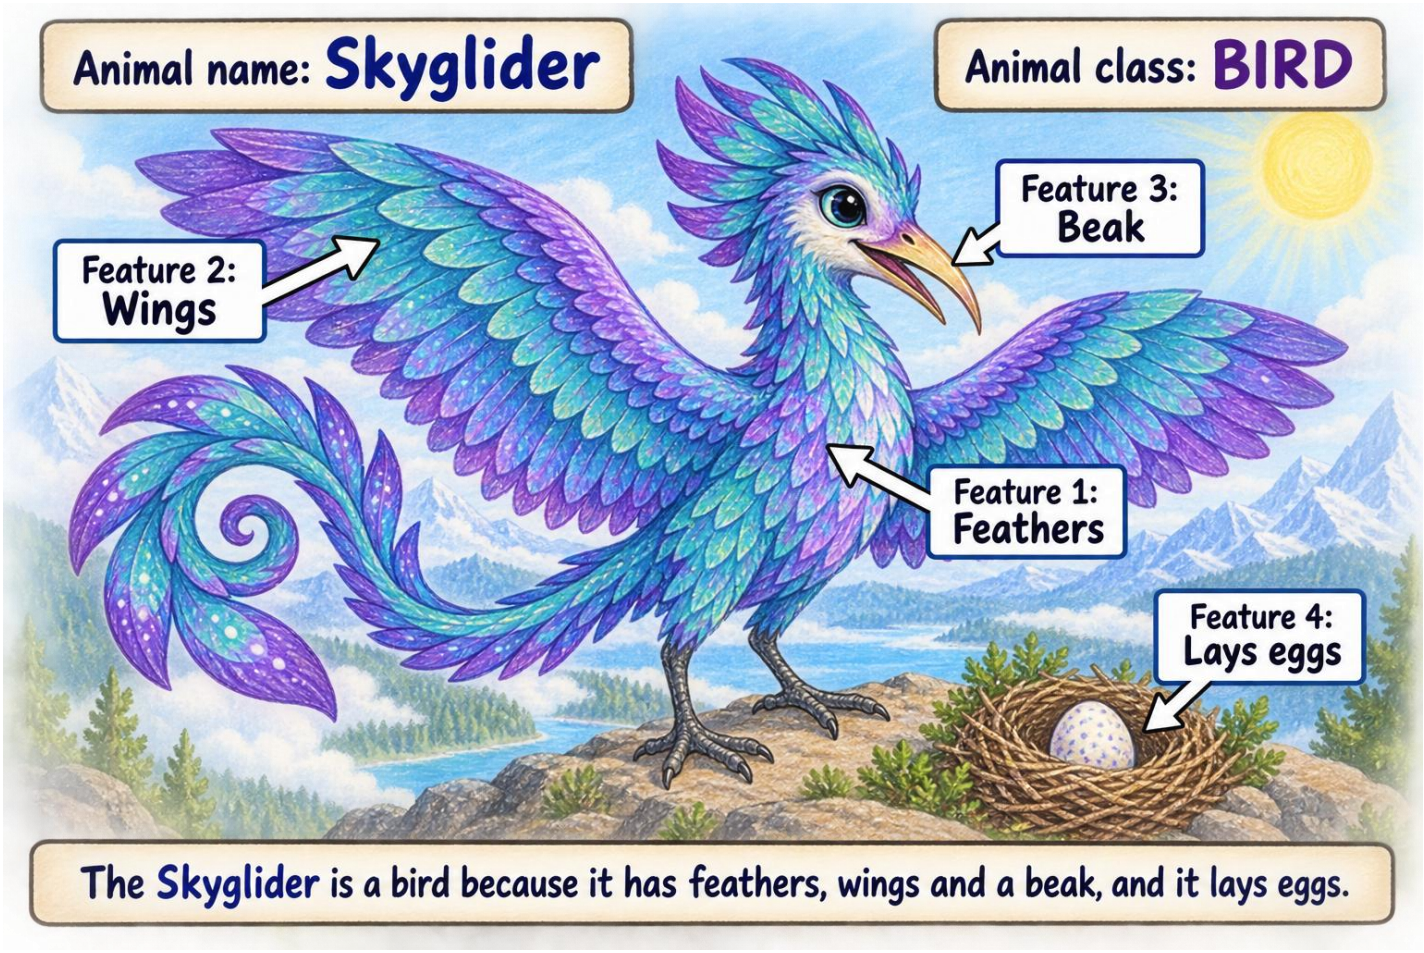

How labels earn marks

Each feature is worth 2 marks: 1 mark for the correct assigned-class feature + 1 mark for the correct linked label/fact tag.

Example	Feature	Label / link	Score
Bird: feathers shown; "feathers" arrow points to feathers.	Correct (1)	Correct part (1)	2/2
Bird: beak shown; "beak" arrow points to the wing.	Correct (1)	Wrong part (0)	1/2
Bird: "fur" labelled on body.	Wrong for birds (0)	Cannot earn label mark	0/2
Mammal: "lungs" fact tag points to chest/body. Inner lungs are not drawn.	Correct (1)	Acceptable non-visible link (1)	2/2
Fish: "cold-blooded" fact tag points to the animal/body.	Correct (1)	Acceptable non-visible link (1)	2/2
Fish: "warm-blooded" labelled.	Wrong for fish (0)	Cannot earn label mark	0/2

Key rule. If a label points to the wrong body part, the label/link mark is 0. If the named part is not a feature of the assigned animal class, the whole feature item is 0/2. Non-visible features such as lungs or warm/cold-blooded can still earn full marks when the correct fact tag clearly points to the appropriate body area/animal, even though the inside of the body is not generated.

Full-mark sample

Marking rubric - 10 marks

Part	Marks	How marks are awarded
Feature 1	2	2 = correct assigned-class feature + correct linked label/fact tag. 1 = feature correct, but label/tag missing or points to wrong part. 0 = feature wrong for assigned class or missing.
Feature 2	2	Same rule.
Feature 3	2	Same rule.
Feature 4	2	Same rule.
Presentation	2	2 = relevant science is clear enough to understand; 1 = pupil attempts but meaning is largely unclear; 0 = no oral response after prompting.
TOTAL	10	Score the science feature first. Only a correct feature can earn the label/tag mark.

AI prompt for the presentation script

Copy and complete:

Imaginary animal called [name]

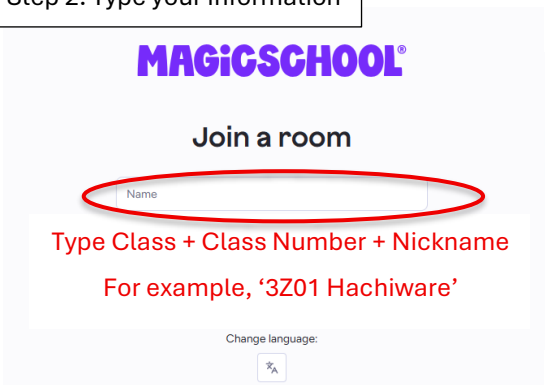

Class: [animal class]

Four features: [feature 1] [feature 2] [feature 3] [feature 4]

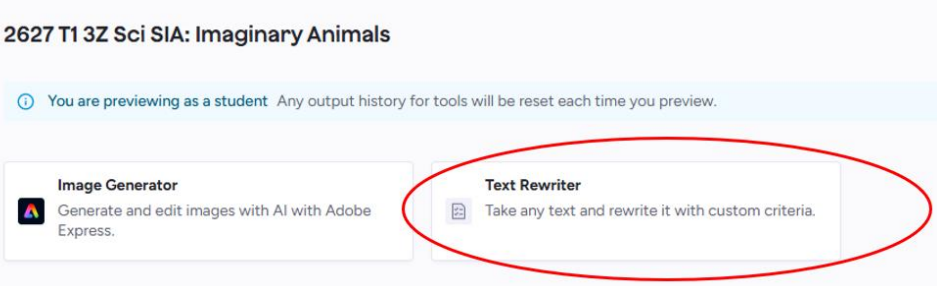

Step 1: Access the link or QR code for your class.

Step 2: Type your information

Step 3: Select 'Text Rewriter'

Remarks: Students may also use Copilot: https://copilot.microsoft.com/ login with MS365 account.

Checklist before submission

Check	Item
☐	I wrote the assigned animal class correctly.
☐	I made an imaginary animal, not a copy of one real species.
☐	I have labelled exactly four features from my assigned class.
☐	The AI picture clearly shows the visible features I chose.
☐	I removed any incorrect label or regenerated the image when necessary.
☐	Each visible label points to the correct body part.
☐	Each non-visible fact tag points clearly to the correct body area / animal.
☐	I checked that every labelled feature matches my assigned class.
☐	My name, class and class number are shown.
☐	I practised a one-minute presentation using only the same four checked facts.
☐	I will submit by 23 October 2026.

Presentation arrangements & home support

- Submit the final labelled image to the Teams Assignment.
- During selected single lessons in the first three weeks of November, five pupils are selected by lucky draw to present for up to one minute.
- The teacher marks by criterion during the lesson.
- Parents may help type the prompt and practise, but the pupil must choose/check the science and explain it in their own voice. AI image beauty is not assessed.
