SCIENCE IN ACTION

Term 1 Student Briefing

Grade 3 AI Imaginary Animal

Task • 10-mark rubric • worksheet • one-minute presentation • submission

GRADE 3

What happens and when

Submit the final labelled image to the Teams Assignment by 23 October 2026. The submitted digital work will remain in Teams for the presentation sessions.

5 Oct

Guidelines

Read the task, rubric and worksheet.

23 Oct

Submit product

Submit the final labelled image to the Teams Assignment . Late marks may be deducted.

Nov weeks 1–3

Lucky draw

Five pupils are selected during a 15-minute part of a single lesson.

1 minute

Present

Explain the science clearly. The teacher marks by criterion.

Presentation marks

2 = relevant science is clear enough to understand • 1 = pupil tries, but the meaning is largely unclear • 0 = no oral response after prompting. Grammar, accent and fluency are not assessed.

Grade 3 task

G3 T1

Create an AI Imaginary Animal for the class assigned by lucky draw.

Write first

My assigned animal class: _____

My imaginary animal name:
_____

Important

- Use the class posted by the teacher in Teams.
- Do not change class without approval.
- **Label ONLY features from the assigned class.** Can add creative features from another animal class without labelling.
- AI image beauty is not assessed.

1 Choose

Select exactly four correct features from your assigned class ONLY.

2 Generate

Ask AI to make the four selected assigned-class features clear in the picture.

3 Label

Add four clear arrow labels or fact tags. A visible label must point to the correct body part.

4 Finish

Write the animal name and assigned class. Check that all four labels or fact tags are correct for the assigned class. Prepare a clear one-minute presentation.

Build a science-safe image prompt

G3 T1

Complete the paper Prompt Builder before opening the iPad.

1 Class

My assigned animal class is …

2 Visible features

List the FOUR correct assigned-class features. Make every visible feature clear in the picture.

3 Appearance

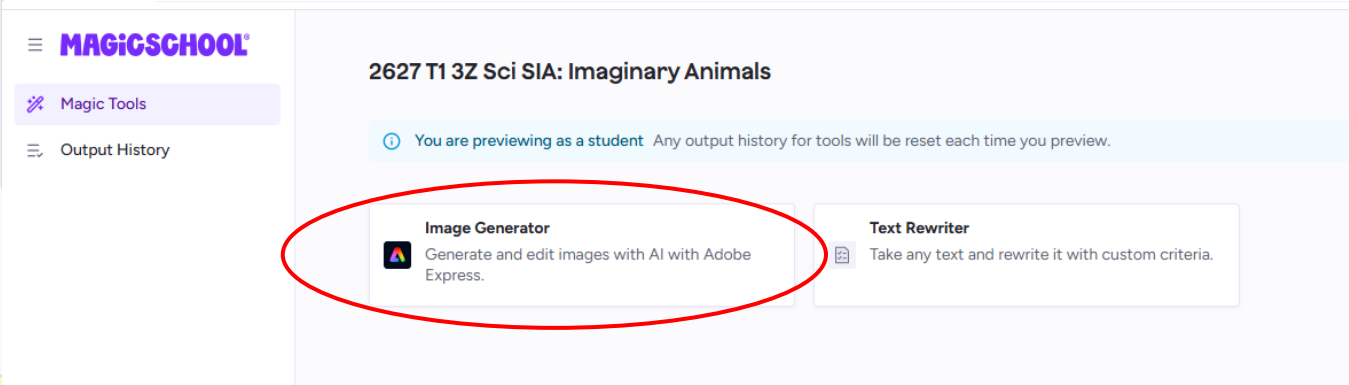

Make it imaginary and different from a real species.

4 Limits

Simple background; clear space for labels; NO labels for features from another animal class.

Image prompt

Create a child-friendly imaginary animal called [name]. It belongs to the [assigned class] class. The following FOUR assigned-class features must be clearly shown: [feature 1], [feature 2], [feature 3], [feature 4]. Make every visible feature easy to see and leave space for arrows and labels. Clearly label the features with the animal class assigned. Make it imaginary and different from a real species. [Creative features] Use a simple background.

TEACHER OR PEER CHECK • Are the class and visible features scientifically correct before the pupil uses AI?

Check the AI image before adding labels

G3 T1

AI can make mistakes. The pupil is responsible for checking the science.

1 Compare

Compare the image with the animal-class feature bank. Circle each correct visible feature.

2 Improve

If a required feature is missing or a wrong-class feature appears, change the prompt and generate once more.

3 Add evidence

Visible feature: arrow label must point to the correct part.
Non-visible feature (e.g. lungs, warm/cold-blooded): a fact tag may point to the correct body area / animal even if the inside is not drawn.

MARKING EXAMPLES

- Correct feature + correct pointer = 2/2
- Correct feature but label points to wrong part = 1/2
- Feature not correct for assigned class = 0/2
- Lungs / warm-cold blooded can earn 2/2 with a correct fact tag linked to the body.

Use checked facts to ask AI for a script

G3 T1

AI organises the pupil's facts. It must not invent the science content.

My Fact Bank

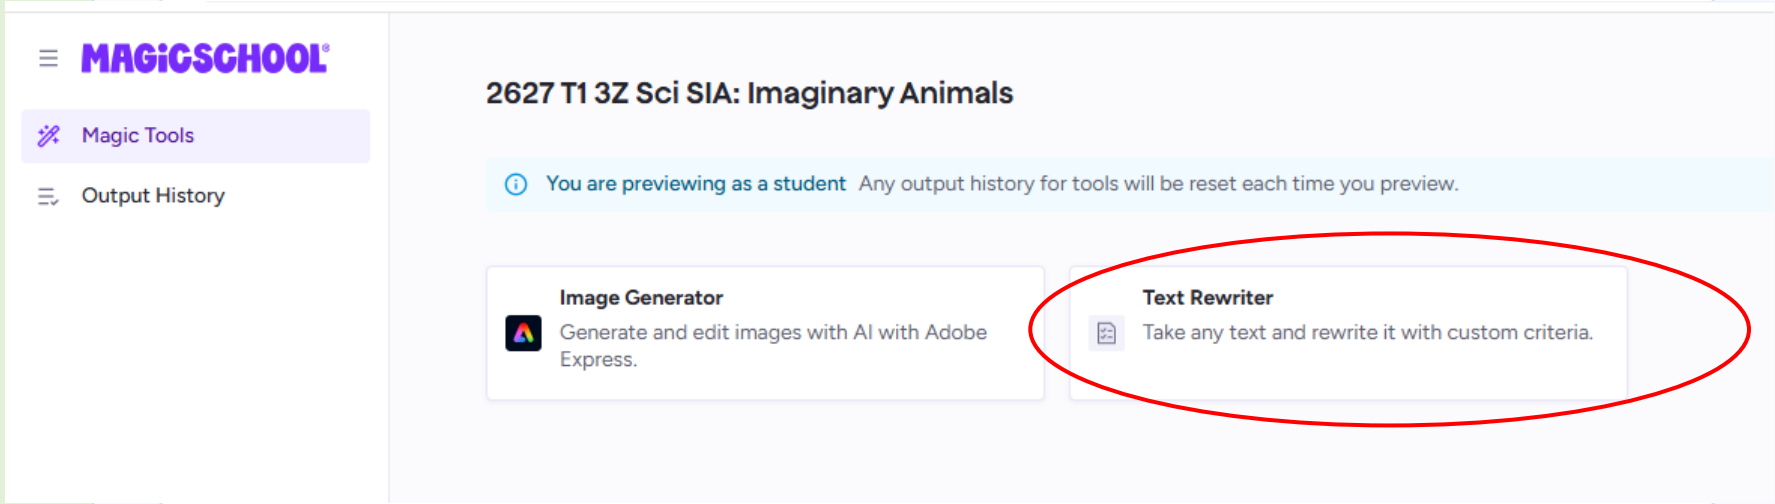

Assigned class: _____

Animal name: _____

Checked feature 1: _____
Checked feature 2: _____
Checked feature 3: _____
Checked feature 4: _____

Script prompt

Imaginary animal called [name]
Class: [animal class]
Four features: [feature 1] [feature 2] [feature 3] [feature 4]

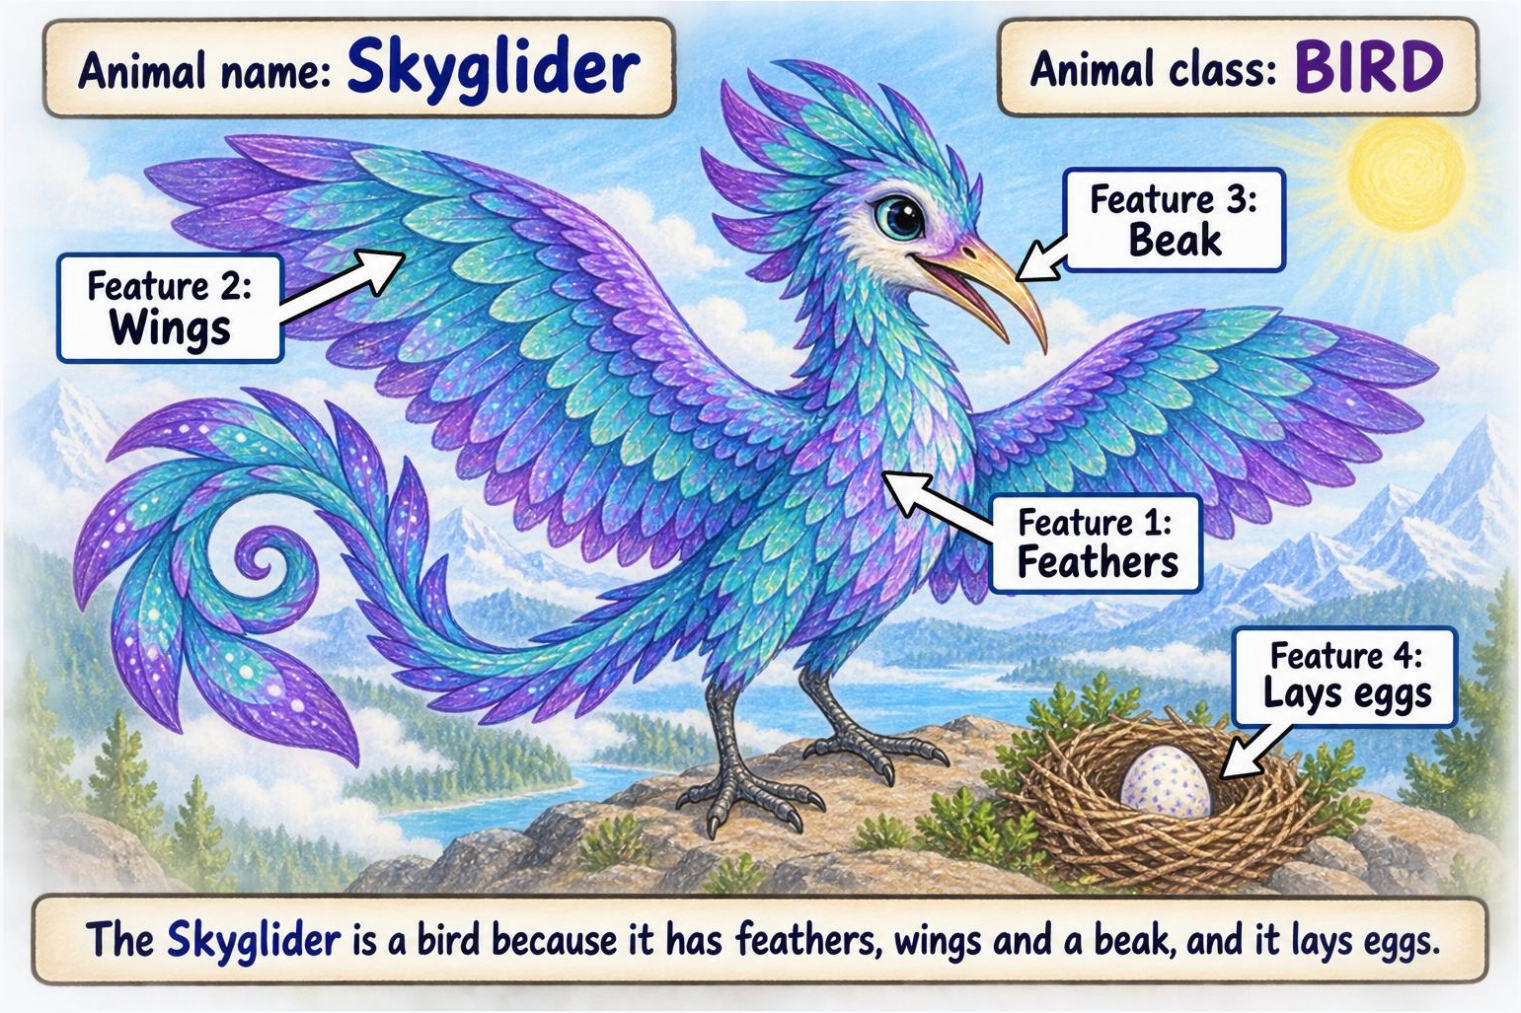

FINAL CHECK • Highlight the class and all four features. Delete every fact that is not in the checked Fact Bank for labelling.

Grade 3 full-mark example

G3 T1

The Skyglider is imaginary and matches the assigned class Birds.

Why it can earn full marks

- Animal assigned class is clear
- Four features all belong to the assigned class
- Visible labels point to the correct body parts
- Non-visible facts use clear fact tags linked to the animal/body
- The pupil can explain the same four checked features

Grade 3 animal class feature bank

G3 T1

Choose four features from the assigned class only.

Mammals	hair/fur • lungs • produce milk • warm-blooded • most give birth to live young
Birds	wings • feathers • beak • lungs • warm-blooded • lay eggs
Fish	gills • most have fins • most have scales • most are cold-blooded • most lay eggs
Reptiles	scales • lungs • cold-blooded • most lay shelled eggs
Amphibians	moist skin • gills when young • lungs when adult/on land • cold-blooded • eggs without shells
Insects	six legs • head/thorax/abdomen • antennae • spiracles • hard outer covering • no backbone • lay eggs

Keep the word “most”. Choose four features from the assigned class only. For lungs or warm/cold-blooded, a fact tag may point to the body even when the inner structure is not shown.

How Grade 3 earns 10 marks

G3 T1

Score the science feature first. A wrong-class feature cannot earn the label mark.

FOUR FEATURES × 2 MARKS

For each feature

2 Correct assigned-class feature + correct linked label/fact tag

1 Correct feature, but label/tag is missing OR points to the wrong part

0 Feature is wrong for the assigned class or missing — even if it has a label

PRESENTATION 2 MARKS

Explain the science

2 Relevant science content is clear enough to understand.

1 The pupil tries to speak, but the meaning is not understandable.

0 The pupil does not speak after reasonable prompting.

Total

Four correct assigned-class features × 2 + presentation 2 = 10 marks

Grade 3 AI process

G3 T1

AI makes the base image. You choose and check the science.

1

Plan

Write the assigned class, animal name and four correct features on the worksheet.

2

Prompt

Ask AI to label ALL FOUR selected assigned-class features clearly visible.

3

Check

Compare the image with the feature bank. Regenerate if an important visible feature is missing.

4

Label

Add four arrow labels / fact tags. Visible labels must point to the correct part. Fact tags for lungs or warm/cold-blooded may point to the body.

5

Practise

Use the script scaffold and keep the presentation under one minute.

Prompt starter

AI image generation: Create a child-friendly imaginary animal called [name]. It belongs to the [assigned class] class. The following FOUR assigned-class features must be clearly shown: [feature 1], [feature 2], [feature 3], [feature 4]. Make every visible feature easy to see and leave space for arrows and labels. Clearly label the features with the animal class assigned. Make it imaginary and different from a real species. [Creative features] Use a simple background.

Script for presentation:
Imaginary animal called [name]
Class: [animal class]
Four features: [feature 1] [feature 2] [feature 3] [feature 4]

Grade 3 one-minute presentation

G3 T1

State the assigned class and explain all four labelled features.

Suggested structure

Good morning. My assigned animal class is ___.

My imaginary animal is called ___.

It has / It is / It can ___.
It also ___.

These four features match the ___ class.

Therefore, my animal belongs to the ___ class. Thank you.

Before handing in

- ☐ Correct assigned class
- ☐ Imaginary animal name
- ☐ Exactly four features from the assigned class ONLY
- ☐ Visible labels point to the correct body parts
- ☐ Non-visible fact tags link clearly to the body
- ☐ Name, class and class number

Before presenting

- ☐ State the assigned class
- ☐ Name the imaginary animal
- ☐ Point to or name all four features
- ☐ Explain that the features match the class
- ☐ Keep within one minute

Teams upload guide

The QR code or link only opens the assignment or upload instructions. It does not add marks.

1. Open the link or scan the QR code.
2. Select View Assignment.
3. Select Attach, then Upload from this device.
4. Choose the correct photo or image.
5. Select Hand in and check that the file appears.

Remember

Due date: 23 October 2026.

Final check

Use the worksheet and rubric before you hand in your work.

Science

- □ Every label is correct
- □ Every feature matches the learning content
- □ I can explain my choices

Product

- □ All required parts are present
- □ My name, class and class number are shown
- □ I will submit on time

Presentation

- □ I practised for one minute
- □ I can point to my evidence
- □ My science meaning is clear
